

Install and run the code

1) Install node

To run the project locally you have to install the Nodejs (v8.9.0) on your machine. Follow this link for installation instructions: <https://nodejs.org/en/download/>

2) Install the project dependencies

Once you've node installed, open the project folder in your terminal and type :

```
npm install
```

This will download the project dependencies.

3) Run the app

Now in the project root type

```
npm start
```

This will run the applications locally on port 3000

To see the game type localhost:3000 in your browser (preferably Google Chrome)

If you have trouble

The game will be deployed on **urgame.yousefmohsen.dk** in case you have trouble setting the project up.
